

TESTS APPLIED TO EDA PRODUCTS

Test carried out during production

1. Open circuit test after winding of the coil
2. After fixing the bottom plate
 - High voltage
 - Current test
3. After the painting process
 - Current test
 - Lamp test

Tests carried out in the lab (EN standards)

- Performance rules applied
- Current test
- Lamp power voltage test
- Winding temprature test
- High voltage test
- Isolation test
- Humidity test
- Life test
